

Requirements for the Photoshop Friends and Family Collage

Make a Photoshop file that is 900 pixels wide by 400 pixels high, with a resolution of 72 dpi.

The object of the assignment is for you to make a collage of your family and friends. You will need to use at least 20 photos to make the collage. The collage should be made of your own photos, not images from the Internet. The assignment is meant to show your skills in editing and blending together photographs.

Carefully crop and arrange the photos using the layers features of Photoshop. Remember that you can rearrange their order from top to bottom at any time.

You may wish to work with a background layer.

Text Requirements:

Your collage needs to have a theme phrase or statement in large text. Be sure to use some text processing features for your text.

You also need your name and period number in small text somewhere on the collage.
