

Map Assignment Requirements.

This is a color project that also involves the use of layers and the symbols library.

You must design a single page, 8x10 that shows you use of mapping skills. You may set the page up to be portrait or landscape in style. This project will be submitted as an illustrator file. Use our naming protocol for the file name: yourlastname, first initial, period number, map.ai Remember, no spaces and use lower case letters,

The finished project should include color graphics in major sections, that are separated in layers. For examples refer to the ski map and museum maps in the Map Assignment folder on the Big Mac server.

Your map should be the layout of a large public area. Some additional project types might be a shopping center, a city park, an airport, a zoo, or theme park. In some cases you would only show a major portion of the total area. Be sure to include symbols for important areas, like restrooms, eating areas, parking, telephone or emergency access,

The drawing should include some non map areas, to describe your facility, and also if you need a symbol key make that in a separate layer. Your **minimum number of layers should be six**, but you are encourage to use more if you need them, and to use sublayers where appropriate.
